About Us

Turbo Freeze is a Home Grown Singapore Company that started Manufacturing Commercial Refrigerator using the most traditional handmade method from nothing to a product, we have definitely gained extensive experience & expertise since then. Today, Turbo Freeze is unleashing its potential in system design in to South East Asia Market to help customers cut down after sales problems using our refrigerator.

Over the years, we have also apply our knowledge & experience gained thru user comment, engineering upgrade & technology advancement to make mission impossible designs to take over tradiional design which is capable to be more efficient in overall performance. Our objective here is never to compete in pricing but to provide solutions to customers who believes us.

Looking ahead, Turbo Freeze aims to build quality commercial refrigeration products that is affordable, robust, high in performance, user friendly for both user & technical support.

Commercial Refrigerator & Freezers

Delivering superior performance to the World.

Top Mounting Compressor Unit Features:

Features:

- Evaporator fan is controlled by a separate breaker, it can be set On or Off only when temperature is achieved, this feature allows cool air circulation to maintain constant temperature (default setting)
- Polyurethane thickness is 40kg/m³ using Semi-Automatic machine infusion foaming method to control evenness during process.
- Door frame heater stop working when temperature is achieved, its meant to reduce electrical consumption plus prolong heater life span.
- Top mounted compressor unit c/w recess feature, allows maximum storage space and 100% retractable & removable for servicing
- Supplied with condensor filter for easy cleaning and maintenance
- Micro computer controlled systems for easy monitoring and functioning
- Fabricated from the best quality components, designed to perform with the highest efficiency, economical in pricing, superior in food safety and the best value for the customers
- Stainless Steel Doors, c/w the finest finishing. Using thick stainless steel plates for higher tensile strength, fewer dents and scratches
- Specially designed cooling system with high ambient working temperature, allows food to be chilled at a lower temperature for best food preservation and longer times
- Special designed door gasket, allows "excellent" door sealing effects and is easy to change and clean

- 1 Removable door gasket
- 2 Ergonomic door handle
- 3 Plug in cooling system
- 4 Intelligent PCB board
- 5 Evaporator with led lighting system
- 6 Removable filter

Side Mounting Compressor Unit Features:

Features:

- Evaporator fan is controlled by a separate breaker, it can be set On or Off only when temperature is achieved, this feature allows cool air circulation to maintain constant temperature (default setting)
- Polyurethane thickness is 40kg/m³ using Semi-Automatic machine infusion foaming method to control evenness during process.
- Door frame heater stop working when temperature is achieved, its meant to reduce electrical consumption plus prolong heater life span.
- Slim compressor compartment, for maximum storage space
- Draw out type compressor compartment, which is 100% retractable & removable for ease of servicing
- Supplied with condenser filter for easy cleaning and maintenance
- Micro computer controlled systems for easy monitoring and functioning
- Fabricated from the best quality components, designed to perform with the highest efficiency, economical in pricing, superior in food safety and the best value for the customers
- Stainless Steel Doors, c/w the finest finishing. Using thick stainless steel plates for higher tensile strength, fewer dents and scratches
- Specially designed cooling system with high ambient working temperature, allows food to be chilled at a lower temperature for best food preservation and longer times
- Special designed door gasket, allows "excellent" door sealing effects and is easy to change and clean
- Adjustable, heavy duty PVC coated shelves

- 1 Removable door gasket
- 2 Ergonomic door handle
- 3 Thick hinge plate
- 4 Led lighting
- 5 Intelligent PCB board
- 6 Condenser bottom heat discharge
